

GROW BIGGER AND HEALTHIER WILDLIFE THE WAY NATURE INTENDED

Midwestern BioAg Wildlife Plot Program

Enhance the health of neighborhood wildlife by using quality sources of fertility that your soil and food plots with love. Midwestern BioAg uses environmentally-friendly ingredients that creates high levels of nutrient density and palatable forage that attracts wildlife. All Midwestern BioAg blends incorporate sulfate sulfur, which is a major function in creating complete plant proteins which that are extremely vital to soil and animal health as opposed to basic NPK fertilizer which can be harmful to soil health and is subject to leaching into water systems.

We suggest taking a soil test and/or consulting with a Midwestern BioAg team member for the best recommendations. If choosing to forgo a soil test, see below for blend recommendations proven on good soils.

CROP	RECOMMENDATION
Corn	200#/acre of 24-10-10
Soybeans	200#/acre of 3-10-25
Brassicas/Turnips	150#/acre of 10-9-10 at planting, then 100#/acre of 20-5-5.
Existing Clover/Alfalfa	250#/acre of 3-10-25 after first cutting/mowing.
New Seeding Clover/Alfalfa	100#/acre of 10-9-10 at planting, then 200#/acre of 3-10-25 after first cutting/mowing.
Plot Screens (Egyptian Wheat)	100#/acre 24-10-10 at planting, then 100#/acre 24-10-10 after five inches of growth.
Oats/Peas	150#/acre of 9-10-15 at time of planting.
